Summary

Engineer-turned-Analyst who took an industrial AI product from 0→1: owned the GT gas-turbine health-monitoring system end-to-end, from requirements through ML-driven failure prediction to deployment. Now runs business analysis across 5 concurrent IoT/AI initiatives spanning 150,000+ assets. B.Tech Computer Science, 9.31 CGPA; ISRO internship.

Education

Pandit Deendayal Energy University (PDEU)

B.Tech in Computer Science; CGPA: 9.31

Gandhinagar, Gujarat

Sep 2021 – May 2025

Experience

Reliance Industries Limited

Analyst – Business Analysis, Digital & IoT

Navi Mumbai, Maharashtra

Aug 2025 – Present

- **Product Ownership, GT Health Monitoring (0→1 AI System):** Owned the full product lifecycle of an in-house gas-turbine health-monitoring system (ML-based failure prediction + anomaly detection, MLOps), from requirements gathering with reliability engineers through feature definition, engineering coordination, and deployment. Turns model output into 3–8 days advance failure warning for operations, reducing unplanned outages and production losses.
- **Multi-Project Portfolio:** Run business analysis across 5 concurrent IoT and asset-analytics initiatives, breaking down complex reliability workflows into structured, trackable systems; align engineering, operations, and vendor stakeholders on milestones, dependencies, and delivery.
- **Asset Performance Management (GE Vernova):** Partner with GE Vernova on an APM platform covering 150,000+ assets across 10 sites; core team member driving adoption of the APM software upgrade across site teams.
- **Early Event Detection (Honeywell):** Manage an established AI-based failure-prediction program run with Honeywell across 1,000 critical rotary assets, automating the conversion of model alerts into early notifications (3–8 days ahead) for operations teams.
- **IoT Instrumentation:** Scoped and planned 3 IoT projects instrumenting ~80 rotary assets across 3 sites, tracking milestones and dependencies in MS Project (Gantt); improved reading accuracy, reduced manual effort, and cut equipment downtime.
- **MTBF Dashboard:** Defined the metrics for and built a reliability dashboard, using SQL to consolidate asset-level incident data across multiple sites, to track failure rates and asset health.

Space Application Centre, ISRO

Data Science Intern | [NISAR Soil Moisture Products](#)

Ahmedabad, Gujarat

Jan 2025 – May 2025

- **Satellite Imagery Data Pipeline:** Built an end-to-end Python pipeline for satellite imagery processing and geospatial analysis at 100 m resolution, feeding SAC's pre-launch soil-moisture retrieval work for the NASA-ISRO NISAR mission. ISRO published the operational 100 m soil moisture products in Feb 2026.

AM/NS India Limited

Web Development Intern

Surat, Gujarat

Jun 2023 – Jul 2023

- **Employee Notification System:** Revamped and migrated the birthday and anniversary notification automation to a Python/Django framework serving 60,000 employees nationwide; redesigned the UI and automated the company-wide email workflows.

Projects

- **Air-Traffic Delay Prediction (COVID Impact Study):** Built ML models to predict U.S. air-traffic delays and translated predictions into a business-impact analysis with strategic and operational implications for the aviation industry.
- **Bone Fracture Detection from X-ray Images:** Shipped an ML-based diagnostic tool end-to-end, prioritizing an intuitive interface for real-world clinical users.
- **Health & Fitness Tracker:** Designed and built a user-facing Flask platform (login, calorie/BMI/workout tracking) with personalized content and recommendations.

Skills

- **Product & Program:** Requirement Gathering, Product Lifecycle Management, Stakeholder & Vendor Management, Project Planning (MS Project, Gantt), Cross-functional Coordination, Business Impact Analysis
- **Domain:** Industrial IoT, Predictive Maintenance, Asset Performance Management, Reliability Analytics
- **Analytics & BI:** Power BI, Tableau, SQL, Python (NumPy, Pandas)
- **Technical Fluency:** ML (failure prediction, anomaly detection), MLOps workflows, REST APIs, Django, Git

Certifications

- McKinsey Forward Program, McKinsey & Company, June 2026
- Google Cloud GenAI Fundamentals, February 2024
- Understanding Incubation and Entrepreneurship, IIT Bombay (NPTEL), April 2024
